The Adaptive HR Organization

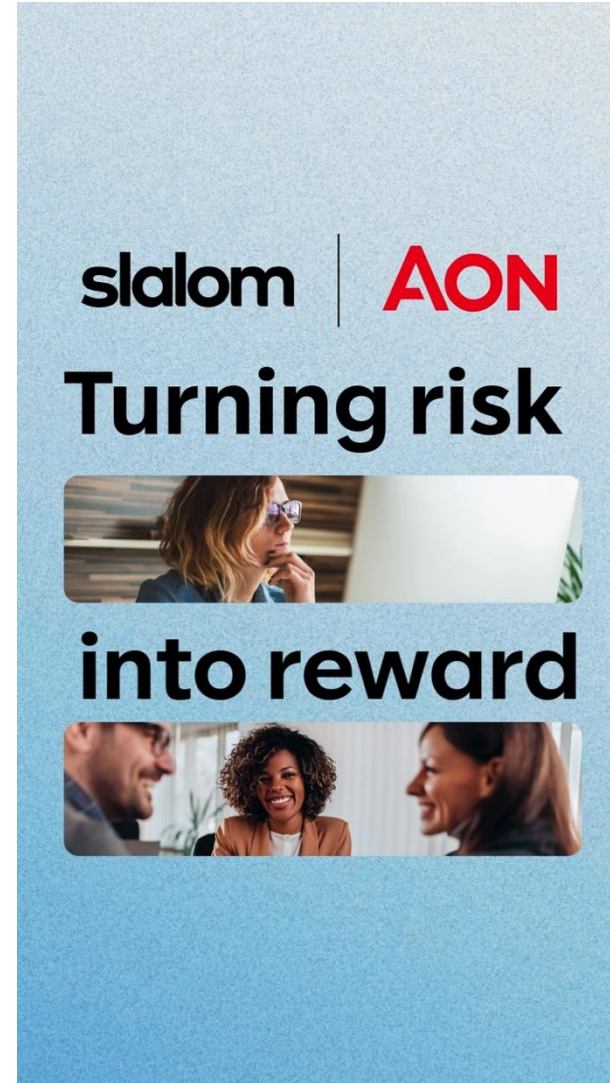

Building an HR organization that is AI-
Enabled and Future-Ready

Selected slides for Aon partnership

Reference for Templating

Goal is to use this image for the color / branding theme in the HTML

AI is already playing a role in the Strategic HR organization

HR Technology

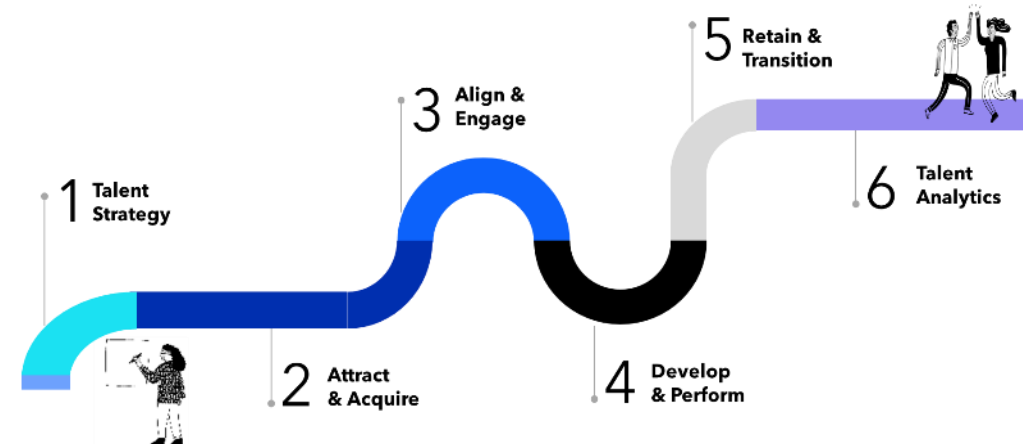

Streamlining HR operations by automating processes and enhancing data-driven decision-making for more efficient talent management

HR Organization

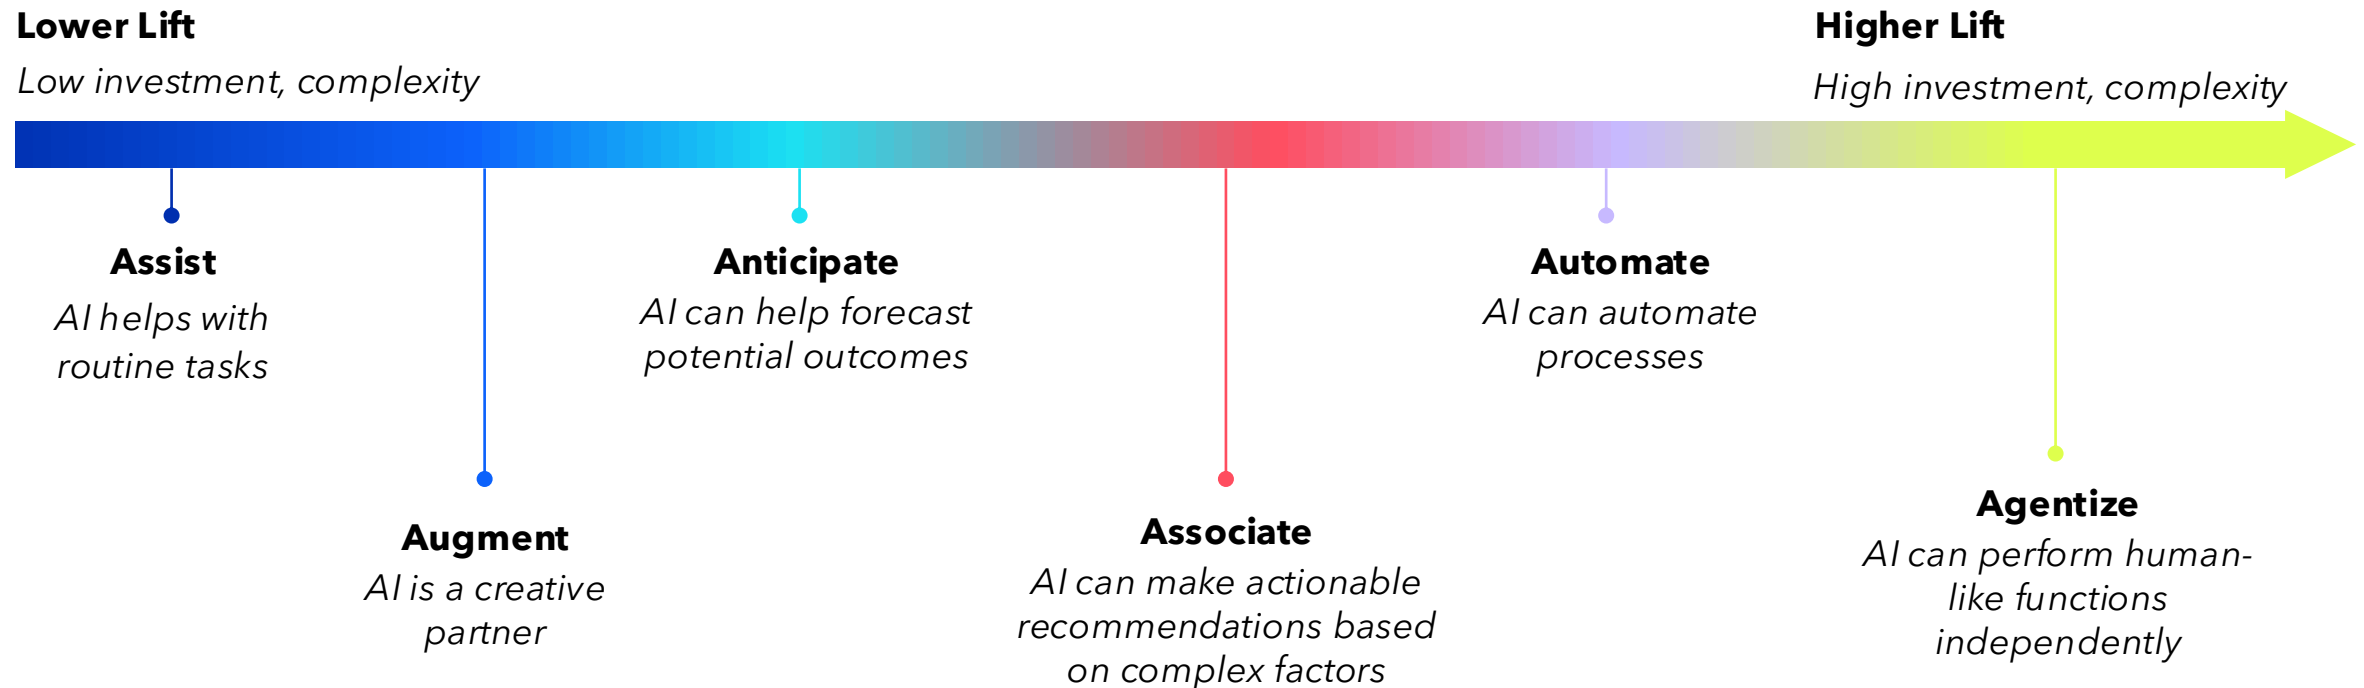

Empowering HR teams to focus on strategic priorities by reducing administrative tasks, enhancing employee engagement, and improving retention

Lead the Organization

Optimizing workforce planning, improving diversity, and enhancing employee experience, driving overall business agility and growth

AI will **continue to evolve** to shape the work we do and how we do it. Where are you focused on this spectrum?

Practical *Applications* Aligned to *Outcomes*

HR & Benefits Potential AI Use Cases:

1

Productivity

- HR chatbots for instant employee queries resolution
- Optimization of benefits administration
- Performance analytics and feedback systems
- Autonomous systems for payroll and compliance management
- Smart scheduling systems for employee project assignments

Operate Better

2

Differentiation

- Predictive analytics for employee turnover
- Gamification of training programs
- Crowdsourced learning and development content curated by AI
- Intelligent job matching for internal mobility
- Personalized career paths

3

Disruption

- Real-time labor market analysis and strategic workforce planning
- Cognitive job redesign to redefine job descriptions and roles based on emerging trends and business needs
- Organizational network analysis to analyze networks within an organization leading to a redefinition of org structure
- AI guiding HR policies and decisions in alignment with ethical standards

Transform Business

AI-Driven HR: Functional View

	REACTIVE	PROACTIVE	INTERACTIVE	PREDICTIVE
	HR teams are largely transactional and compliance-driven, focused on resolving employee issues quickly after they arise. We anticipate AI efficiency gains of ~10-15%.	HR shifts toward prevention and enablement, using AI to minimize errors, streamline processes, and improve continuity. We anticipate AI efficiency gains of ~20-25%.	HR teams partner with employees and managers, leveraging feedback and AI insights to enhance services, learning, and career development. We anticipate AI efficiency gains of ~35-40%.	HR becomes strategic and anticipatory, using AI to resolve issues before they occur and to continuously align workforce capabilities with business needs. We anticipate AI efficiency gains of 50%+.
Core Systems	AI supports basic automation of payroll, HRIS data entry, benefits questions.	AI streamlines compliance, routing HR cases, and reduces manual errors.	AI agents handle complex transactions with human-in-the-loop refinement.	Systems are self-healing and detect anomalies before issues occur.
Talent & WF Development	Digital learning libraries recommended manually by HR.	AI curates personalized learning content and skills pathways.	Adaptive learning incorporates feedback to refine career journeys.	Predictive reskilling recommendations and dynamic career marketplaces.
Employee Experience	Chatbots provide basic FAQs; issues often escalated.	Personalized portals surface relevant HR content and resources..	AI agents resolve majority of queries with contextual understanding.	AI anticipates needs and continuously enhances experience.
Strategic WF Insights	Manual reporting on headcount, attrition, compliance.	AI augments dashboards with anomaly detection and alerts.	AI enables real-time "what-if" workforce scenarios.	AI anticipates needs and continuously enhances experience.

Data Readiness for AI **Project Approach**

The Data Readiness for AI offering builds a high-quality data foundation to power advanced AI through a structured assess, design, and roadmap process. This approach bridges the gap between siloed data and scalable AI, delivering an actionable plan to unlock long-term value and innovation.

Assess & Baseline

Perform **diagnostic assessment and strategic alignment** activities to audit the data landscape and technical readiness in-order to map high-priority AI use cases to foundational data capabilities.

Design AI-Ready Data Foundation

Perform **future-state architecture and governance design** activities to establish a scalable technical framework and compliance guardrails optimized for AI integration and data trust.

Roadmap & Enablement

Perform **strategic execution and operational scaling** activities to deliver a prioritized 24-month roadmap and operating model that successfully operationalizes and scales AI value across the enterprise.

Accelerators, Artifacts & Templates

Don't start from scratch!! The DAIS team is maintaining a repository of tools you can use to streamline your engagement.

Design AI-Ready Data Foundation

Roadmap & Enablement

Data & AI Maturity Assessment

It truly depends on the scope of the Data AI Readiness engagement if that needs a current state maturity assessment. See the below client deliverable for reference:

[Deliverable #1 - Current Data Maturity Assessment.pptx](#)

Data & AI Strategy Market Solution Kit

Reference Data & AI strategy Market solution kit for a lot of good content that already exists in our Slalom DAIS repository

[Slalom Data and AI Strategy Market Solution Kit.pptx](#)

Prioritization Framework

Option1: Desirability, Viability Feasibility (DVF) Prioritization Framework: [DVF Prioritization Framework.pptx](#)

Option2: Using a 2*2 matrix for value and effort and using T-shirt sizing for quantifying the effort:

[Prioritization Frameworks.pptx](#)

MARCH 2026

The Adaptive HR Organization

Building an HR organization that is AI-
Enabled and Future-Ready

Selected slides for Aon partnership

Data Readiness for AI: Turning AI Ambition into Scaled Execution

What This Is

- ✓ Delivery playbook that connects discovery to delivery
- ✓ Grounds AI use cases in real data capabilities
- ✓ Built for GenAI and advanced AI patterns

Why It Matters

- ✓ AI stalls without data foundations
- ✓ Surfaces data risk early
- ✓ Enables architectures that scale (RAG, embeddings, vector stores)
- ✓ Moves teams from pilots to enterprise value

What's Inside

- ✓ How to use the playbook
- ✓ Delivery phases, roles, and outputs
- ✓ Inputs: interviews, assessments, prioritization tools
- ✓ Outputs: architectures, roadmaps, exec readouts
- ✓ Lessons learned from delivery

When this offering is in play

- ✓ AI is a priority, but data foundations are unclear or uneven
- ✓ GenAI use cases (RAG, copilots, agents) are blocked by data access, trust, or architecture gaps
- ✓ Leaders need to sequence investments before scaling beyond pilots
- ✓ Multiple teams are building AI without shared data standards

Delivery Flow & Outcome

- ✓ Assess & Baseline → Design AI-Ready Data Foundation → Roadmap & Enablement
- ✓ Clear alignment of data foundations to AI strategy, enabling confident AI scale

When this offering is not the right fit

- ✓ Data foundations are already enterprise-grade and AI-ready
- ✓ The need is execution of a single, well-scoped AI use case
- ✓ The focus is model selection or app build—not data enablement
- ✓ Governance, architecture, and ownership are already established

Slalom never makes the same mistake twice

Tips and tricks from those who've done this before

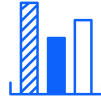

The Reality Check on AI Data Readiness

The systematic capability to discover, access, trust, and integrate data assets to support reliable AI model development, deployment, and operations.

Orphaned Data Ownership

Nobody owns the dataset end-to-end—so quality issues never get fixed.

Data Silos

Critical data remains locked in disconnected systems, limiting reuse and scale.

Poor Data Quality

Models are trained on inconsistent, incomplete, or outdated data.

Bias Baked In

Historical data “looks clean” but encodes inequity—AI scales the problem.

Lineage Blindness

Teams can't trace model decisions back to source data, eroding trust.

Integration Complexity

Months are spent connecting data sources instead of delivering AI value

Additional list

- Train-Serve Drift: What the model learned from isn't what it sees in production—performance collapses fast.
- Access Control Gaps: Security and privacy controls lag behind AI data access pathways.
- No Learning Loop: Model errors don't feed back into data improvement—teams relive the same failures.

Accelerators, Artifacts & Templates

Neha to reframe and restructure based on feedback

Don't start from scratch!! The DAIS team is maintaining a repository of tools you can use to streamline your engagement.

Assess & Baseline

DAIS Capability Assessment

Data & AI Strategy framework capability assessment areas

Click on thumbnail to view the full screen slide from Appendix.

DAIS Assessment Questions by pillar

Click on thumbnail to view the full screen slide from Appendix.

While DAIS Assessment sample questions is a comprehensive list, also refer to the data management assessment questions - [Data Readiness for AI.pptx](#)

Stakeholder Interview Guide

Option 1: [SCG Data and AI Roadmap - Interview Guide.xlsx](#)

Option 2: [Exec_Interview Guide_Internal.docx](#)

Option 3: [CW Property Data Roadmap](#)

Interview Kickoff Deck

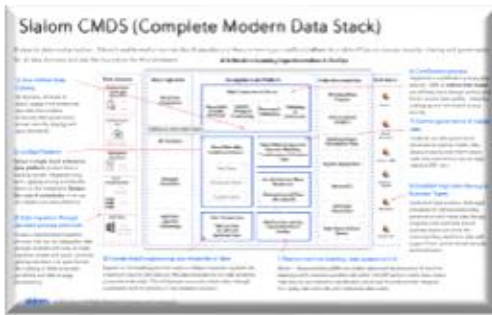

It is highly recommended to have a well-prepared Interview Kickoff Deck to set the stage, especially when meeting the C suite executives for interviews.

[Slalom Interview Kickoff with ALSAC.pptx](#)

Accelerators, Artifacts & Templates

Don't start from scratch!! The DAIS team is maintaining a repository of tools you can use to streamline your engagement.

Assess & Baseline

Understand Current Data Landscape (high level)

Use Slalom's CMDS (Complete Modern Data Stack) to understand and assess data landscape

Slide 59: [Slalom Data and AI Strategy Market Solution Kit.pptx](#)

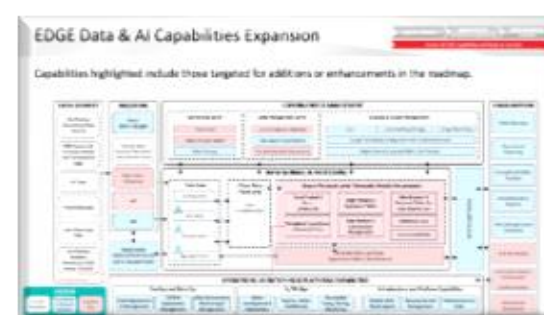

Current Data Architecture

Using Slalom's CMDS as a north star, evaluate the current state data architecture and current state operational readiness

Refer to slide 3 for reference:

[Central Current State Architecture.pptx](#)

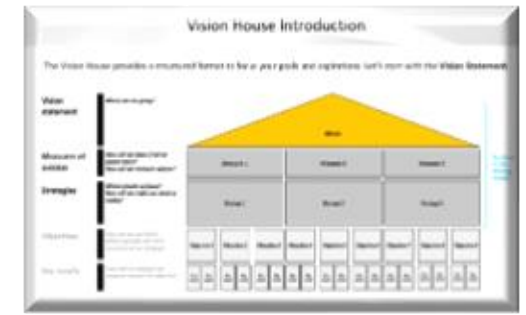

Capability Gap Assessment

Use this Capability Gap assessment to determine what technological capabilities exist in current state and what gaps exist to enable Data & AI Readiness

Refer to slide 19 for reference:

[GAS Data & AI Roadmap and Recommendations.pptx](#)

[Data gap template](#)

Vision House Workshop

Visioning Workshop Activities Reference deck:

[Visioning Workshop Activities.pptx](#)

AI change has **accelerated so rapidly**

Most organizations are unsure where to start or how to keep up to remain ahead of competitors

1

Where do we start?
How do we cut through the noise?

2

What outcomes should we aim for?
How do we measure success?

3

How do we unlock value of AI within the HR function?

4

How do not just leverage AI but play a leadership role in driving workforce transformation?

Where AI is accelerating HR: from strategy to experience

Talent Lifecycle

Talent Acquisition

AI-assisted sourcing, screening, and matching.

Onboarding & Enablement

Chatbots, guides, and personalized learning.

Learning & Development

Adaptive L&D paths and skill gap detection.

Employee Experience

Performance & Engagement

Sentiment tracking and performance insights.

Rewards & Recognition

Comp benchmarking and intelligent recognition.

Career & Mobility

AI-enabled career mapping and gig opportunities.

Strategic HR

Workforce Strategy

Predictive workforce planning and org design.

Offboarding & Alumni

Exit feedback analysis and alumni engagement.

HR Ops & Compliance

Automated policies, scheduling, and compliance.

AI Capabilities across the Talent Lifecycle

AI is not replacing HR—it's augmenting its ability to deliver personalized, data-informed, and strategic value at every step of the employee journey.

Talent Lifecycle Stage	AI Capabilities	AI Tools / Platforms
Workforce Planning	Predictive Analytics, Scenario Modeling	Tableau, Power BI, Visier, OrgVue
Talent Acquisition	Resume Screening, Job Gen, AI Chatbots	HireVue, Eightfold, Paradox
Onboarding & Enablement	Personalized Journeys, AI Learning Paths	WalkMe, EdCast, Workday Journeys
Learning & Development	Adaptive Learning, Skill Gap Detection	LinkedIn Learning, Degreed, Coursera
Performance & Engagement	Sentiment Analysis, Feedback Summarization	CultureAmp, Peakon, Microsoft Viva, Qualtrics
Rewards & Recognition	Comp Benchmarking, Pattern Recognition	Mercer, Payscale, Workhuman
Mobility & Succession	Internal Marketplaces, Career Mapping	Gloat, Fuel50, Workday Talent Marketplace
Offboarding & Alumni	Exit Trend Analysis, Alumni AI Suggestions	Qualtrics, Alumni Network AI, Power BI

AI-Driven HR: Stakeholder View

	REACTIVE	PROACTIVE	INTERACTIVE	PREDICTIVE
	HR teams are service providers, addressing employee needs after they arise with limited personalization. Efficiency gains ~10%.	HR becomes a trusted enabler, using AI to personalize services, reduce friction, and support managers more effectively. Efficiency gains ~20-25%.	HR teams are collaborators and coaches, working alongside AI to deliver adaptive, personalized support to employees, managers, and the business. Efficiency gains ~35-45%.	transforms into a strategic orchestrator of workforce agility, with AI predicting needs and continuously optimizing across all stakeholders. Efficiency gains ~50-60%+
Employee Experience	HR FAQ Chatbot for HR policies	AI nudges employees to use benefits, learning, wellness program	AI provides adaptive, real-time support across channels	Anticipatory experiences—AI predicts and solves needs seamlessly.
Manager Enablement	Managers receive static reports on team performance.	AI surfaces tailored insights on engagement and skills gaps	Managers collaborate with AI co-pilots for coaching and performance.	Predictive dashboards highlight risks, opportunities, retention strategies.
Practitioner Productivity	AI handles repetitive case management and compliance	AI supports workflow automation and routing.	AI copilots interpret data, prepare communications, shape interventions.	HR is fully augmented by AI; practitioners focus on strategy, culture, innovation.
Org Agility	HR monitors talent shifts manually	AI enhances workforce planning and reporting.	AI drives agile talent allocation and mobility (internal gigs, skills marketplace).	Organization dynamically adapts workforce through predictive intelligence.

AI-Driven HR Capability: Talent Lifecycle View

Talent Lifecycle Stage	Reactive	Proactive	Interactive	Predictive
Role of HR	HR teams are process executors, using AI for efficiency in isolated tasks like screening or reporting. (~10-15%)	HR teams become optimizers, embedding AI to streamline processes and deliver consistency across the lifecycle. (~20-25%)	HR becomes a strategic enabler, leveraging integrated AI systems that learn from user feedback to personalize and improve experiences. (~35-40%)	HR acts as a strategic orchestrator, using predictive AI to anticipate needs, guide decisions, and continuously adapt the workforce. (50%+)
Workforce Planning	Static headcount and skills data. Manual forecasting. (Excel, HRIS)	Predictive analytics for workforce supply/demand. (Power BI, Visier)	AI-driven scenario modeling aligns workforce strategy with business forecasts. (Tableau, OrgVue)	Continuous forecasting with real-time skills data and market signals. (Workday, Gloat)
Talent Acquisition	Reactive recruiting, manual résumé screening, inconsistent candidate experience. (LinkedIn, email)	AI supports resume parsing, job posting optimization, interview scheduling. (HireVue, Paradox)	Conversational AI and intelligent matching improve candidate quality and speed. (Eightfold, Paradox)	Predictive sourcing and skills-based hiring anticipate future needs. (Eightfold, Workday Recruiting)
Onboarding & Enablement	Manual onboarding, static content. (SharePoint, Excel)	Personalized onboarding checklists and task automation. (WalkMe, Workday Journeys)	Adaptive onboarding with AI chat support and nudges. (EdCast, Viva Learning)	Self-optimizing onboarding journeys that anticipate new-hire needs and success predictors. (Workday Journeys, Custom GPTs)
Learning & Development	Static course catalogs and compliance-driven training. (LMS)	Personalized, skill-focused learning pathways and AI-curated recommendations. (LinkedIn Learning, Degreed)	Adaptive learning adjusts to performance feedback, development plans and learner behavior. (Coursera, EdCast)	AI forecasts future skills needs and continuously updates learning content. (Degreed, Gloat)
Performance & Engagement	Annual reviews and engagement surveys. (SurveyMonkey, Excel)	Sentiment analysis and pulse surveys inform interventions. (Qualtrics, Viva)	AI copilots help managers with feedback and coaching insights. (CultureAmp, Viva)	Continuous AI-driven engagement forecasting and performance optimization. (Microsoft Viva Insights, Qualtrics)
Rewards & Recognition	Benchmarking and adjustments done manually. (Spreadsheets)	AI assists in compensation modeling and pay equity analysis. (Mercer, Payscale)	AI generates personalized total rewards statements and market comparisons. (Workhuman)	Predictive compensation planning tied to performance, retention, and inflation trends. (Workday Compensation)
Mobility & Succession	Internal moves occur only on request; succession planning is ad hoc. (HRIS)	Skills-based career mapping supports proactive mobility. (Fuel50)	Internal talent marketplace powered by AI matches gigs and roles dynamically. (Gloat, Workday)	Predictive talent analytics forecast successors and mobility opportunities. (Fuel50, Gloat)
Offboarding & Alumni	Manual exit processes and limited follow-up. (Email, forms)	AI automates exit surveys and documentation. (Qualtrics)	AI analyzes exit feedback and identifies retention trends. (Power BI)	Predictive attrition modeling and alumni network engagement to re-recruit top talent. (Alumni Network AI)

AI-Driven HR Capability: Talent Lifecycle View

Talent Lifecycle Stage	Assist	Augment	Anticipate	Automate	Agentize
Role of HR	HR teams use AI to support routine HR transactions and reporting.	HR teams partner with AI to improve efficiency and decision quality.	HR anticipates workforce trends and provides data-driven guidance.	HR workflows are automated, with AI driving accuracy and consistency.	HR becomes a strategic orchestrator, with autonomous AI systems managing tasks and surfacing strategic insights.
Workforce Planning	Headcount reporting and basic dashboards. (Excel, HRIS)	Predictive analytics highlight potential workforce imbalances. (Visier, Power BI)	Scenario modeling anticipates talent gaps. (OrgVue, Tableau)	Real-time forecasting aligns workforce plans to business outcomes. (Workday)	Autonomous workforce simulations that dynamically rebalance resources. (Gloat)
Talent Acquisition	Resume screening and scheduling bots reduce manual workload. (HireVue, Paradox)	AI assists recruiters with candidate matching and job description writing. (Eightfold)	AI forecasts talent demand and pipeline needs. (Eightfold, LinkedIn)	AI automates end-to-end candidate experience and process workflows. (Workday Recruiting)	Autonomous recruiting agents handle sourcing, scheduling, and offers. (Custom GPTs, Workday)
Onboarding & Enablement	AI checklists and onboarding FAQs. (WalkMe)	AI personalizes onboarding journeys and content. (Workday Journeys, Viva Learning)	AI predicts ramp-up speed and identifies early risk indicators. (EdCast)	Automated onboarding tasks (documents, training). (Workday, WalkMe)	Self-learning onboarding copilots continuously improve processes. (Custom GPTs)
Learning & Development	AI suggests training modules based on job title. (LinkedIn Learning)	Adaptive AI personalizes learning based on performance. (Degreed, Coursera)	AI predicts future skill needs and recommends upskilling paths. (Degreed, Gloat)	AI-driven learning orchestration auto-assigns courses and monitors impact. (Workday Learning)	Autonomous skill agents continuously update learning content and pathways. (Custom GPTs)
Performance & Engagement	AI summarizes survey results. (SurveyMonkey, Qualtrics)	AI copilots assist with feedback and coaching. (Viva, CultureAmp)	AI forecasts engagement and attrition risks. (Microsoft Viva Insights)	Continuous monitoring and intervention automation. (Qualtrics)	AI agents drive adaptive performance management and real-time coaching. (Custom GPTs, Viva)
Rewards & Recognition	Compensation benchmarking and analysis support. (Mercer, Payscale)	AI identifies pay equity issues and recommends adjustments. (Workday Compensation)	Predictive modeling for pay and retention risk. (Power BI)	Automated total rewards planning and distribution. (Workday)	AI autonomously manages compensation strategy aligned to performance outcomes.
Mobility & Succession	Static career paths and internal move support. (HRIS)	AI supports career mapping and talent matching. (Fuel50)	AI predicts successor readiness and career paths. (Gloat)	Automated internal mobility orchestration. (Workday Talent Marketplace)	AI autonomously matches talent to opportunities in real time. (Gloat, Custom GPTs)
Offboarding & Alumni	Exit surveys and checklists automated. (Qualtrics)	AI identifies exit themes and sentiment patterns. (Power BI)	Predictive attrition alerts drive retention strategies. (Viva Insights)	AI automates alumni engagement communications. (Alumni Network AI)	Autonomous alumni networks predict and rehire top performers. (Custom GPTs)

Where are you on your AI journey, and what's needed to transition to an **AI-enabled**, future-ready organization?
