

A year ago, we sat down to talk about the future of *Total Rewards*.

The future arrived faster than anyone predicted. What was a conversation about modernization is now a conversation about **rewiring** — and there is a concrete next mile to walk together.

The Adaptive HR Organization
AI-enabled, future-ready

CONTINUE

AI is forcing HR to *rewire* — not just ~~digitize~~.

HR is one of the largest functional headcount blocks in most enterprises, and the function with the most uneven AI deployment. Pockets of progress. No unifying logic.

The conversation has moved from *what does AI mean for us?* to *what do we do Monday morning?* The next mile is tactical, structural, and overdue.

10/10

of the top global risks organizations face today are people-related.

60%

of HR's time is now spent on strategic initiatives — up from 20% a decade ago.

~6

requests in the past six weeks alone, asking the same question: *what should Total Rewards look like in the future?*

THE 3-PILLAR HR OPERATING MODEL COLLAPSES TO 2.

CONTINUE

Where AI is accelerating HR — from *strategy* to *experience*.

Three domains. Nine moments. Every workforce decision your team makes already sits next to an AI capability that can sharpen it. The question is no longer whether — it is which moments to act on first.

I. Talent Lifecycle Talent Acquisition AI-assisted sourcing, screening, and matching at scale. Onboarding & Enablement Chatbots, guides, and personalized learning paths. Learning & Development Adaptive L&D and predictive skill-gap detection.	II. Employee Experience Performance & Engagement Sentiment tracking and performance insights. Rewards & Recognition Comp benchmarking and intelligent recognition systems. Career & Mobility AI-enabled career mapping and internal gig marketplaces.	III. Strategic HR Workforce Strategy Predictive workforce planning and dynamic org design. Offboarding & Alumni Exit feedback analysis and ongoing alumni engagement. HR Ops & Compliance Automated policy, scheduling, and compliance workflows.
---	---	---

CONTINUE

Five stages. From *assist* to *agentize*.

A common diagnostic vocabulary. Pick any function, place it on the ladder, and the next move becomes visible. Most enterprises live between Assist and Augment. The unlock is Anticipate — and beyond.

01 — Reactive	02 — Proactive	03 — Interactive	04 — Predictive	05 — Agentic
Assist	Augment	Anticipate	Automate	Agentize
~10%	~25%	~40%	50%+	10×
EFFICIENCY LIFT	EFFICIENCY LIFT	EFFICIENCY LIFT	EFFICIENCY LIFT	CAPABILITY MULTIPLIER
AI supports routine HR transactions and reporting. Headcount dashboards, resume screeners, chatbots that handle FAQs.	HR partners with AI to improve quality and decision speed. Predictive analytics, personalized journeys, AI co-pilots for managers.	AI surfaces what is about to matter. Scenario models for workforce shifts, forecasted skill gaps, attrition signals before they show up in surveys.	End-to-end workflows run themselves. Onboarding, learning orchestration, compensation distribution — with human-in-the-loop for the calls that matter.	Autonomous agents handle sourcing, matching, performance, and rewards strategy. HR becomes the orchestrator of an AI-augmented workforce system.

Aon brings the data. Slalom brings the build. *One operating system.*

— THE ADVISOR

Aon

Five decades of workforce data, the comp and benefits depth most firms can only describe.

- i.

Radford McLagan
compensation database — the data substrate for every reward decision.
- ii.

Health Risk Analyzer
— predictive model for high-cost claims and pharmacy risk.
- iii.

Workforce Absence Analyzer
— quantifying the true cost of every employee unavailable.
- iv.

AI Sensitivity Analysis
— job- and task-level impact mapping, with skill and pay implications.
- v.

Research-backed POV
— twenty years of CHRO conversations, academic partnerships, sector benchmarks.

— THE BUILDER

Slalom

Operating-model design, agentic AI build, and the change scaffolding that turns insight into action.

- i.

HR tech-stack assessment
— current state of HR systems, data plumbing, and integration debt.
- ii.

Adaptive Organization design
for the CHRO — operating-model redesign with AI at the center.
- iii.

Job reimagination & architecture
— what each role becomes, not just what it does today.
- iv.

Implementation & change
— co-delivered with the client team, not lobbed over the wall.
- v.

Data governance & agentic build
— the execution arm for everything Aon's insights surface.

Most change efforts stop at change management. *We change the systemic HR architecture underneath — jobs, structures, comp, data.*

THE PROOF

We are running this on ourselves. A live diagnostic across five Total Rewards roles and eight levels. Sensitivity analysis, reimaged job architecture, and the operating model to support it — built, not theorized.

A *thirty-day shaped engagement*. Small enough to say yes to. Rich enough to expose value.

01 WEEKS 1-3 Diagnostic Anchor A focused AI sensitivity analysis on one function — Total Rewards is our proven entry point and the most natural starting place given your team's history. Surfaces job-level exposure, skill shifts, and the tech readiness gap.	02 WEEK 4 · ONE DAY Joint Workshop Aon, Slalom, and your team in one room. We translate the findings into a near-term action set — what to reimagine, what to retire, what tech to deploy or shore up.	03 MODULAR Path Forward You pick the next plays — redesign comp leveling, deploy a TR co-pilot, restructure the CoE. We co-deliver. Outcomes feed the broader transformation conversation when you are ready to have it.
---	---	--

WHY TOTAL REWARDS	Comp, benefits, and recognition all sit on data <i>AI can already reason over</i> . It is the function where the diagnostic lands fastest, the evidence is hardest to dispute, and the runway to value is shortest.
------------------------------	---

CONTINUE

“Where did the Total Rewards thinking land — and what should the next mile look like, now that AI has matured?”

— YOUR INVITATION

A 30-minute conversation. No deck behind this one. The shape of a working relationship, sketched together. We are ready when you are.

— YOUR TEAM AT AON

The Human Capital practice, with the partners and analytics teams that originated this work.

In partnership with Slalom, our co-delivery partner for AI-enabled HR transformation.
